SELF-WARMING HAIR CONDITIONING COMPOSITIONSFIELD OF THE INVENTION

5

This invention concerns processes and compositions for the treatment of human hair. More particularly the invention concerns a hair conditioner composition and a conditioning shampoo composition that provide a noticeable increase in temperature during use and that provide good conditioning properties to the hair.

BACKGROUND OF THE INVENTION AND PRIOR ART

15

When treating hair with conditioner, it would be desirable for the conditioner being used to increase in temperature during actual use. More specifically it would be desirable for the conditioner to increase in temperature after being added to hair that is already wet (for example, after shampooing). Alternatively such a conditioner could be added to dry hair and then after water is added, there would be an increase in temperature in said conditioner. Finally, such a conditioner could be put on hair simultaneously with water and the conditioner would increase in temperature.

Such increases in temperature are referred in this specification as self-warming. Such self-warming would provide the consumer with a feeling of comfort and relaxation, as well as supplying the consumer with a "signal" that the conditioner composition is working.

30

- 2 -

A self-warming composition which is presently on the market is Lux Super Rich Self Warming Conditioner. It is an anhydrous glycol containing composition which generates heat through the dissolution of the glycol in water. By contrast
5 the compositions of the present invention generate heat when water adsorbs into the pores of the microporous materials. Anhydrous glycol containing products increase in temperature on application of water, 7 to 8 degrees C under normal conditions of use on the hair. The compositions of the
10 present invention will often increase in temperature significantly more upon application of water during use in the hair.

It is an object of the present invention to provide an
15 improved hair conditioner which provides increased self-warming hair conditioner composition during use (i.e., when applied to hair with water) while not decreasing the conditioning provided, and in some cases increasing the conditioning that is provided.

20

BRIEF SUMMARY OF THE INVENTION

The invention relates to hair conditioner compositions which
25 are essentially anhydrous that comprise:

- (a) one or more microporous materials each of which has an average pore size larger than the critical diameter of a water molecule;
- 30 (b) carrier molecules or molecular aggregates that have critical diameters larger than the largest

- 3 -

average pore size of the microporous materials;
and

- (c) conditioner molecules or molecular aggregates that
have critical diameters larger than the largest
average pore size of the microporous materials.

The invention also relates to a process for treating hair
which comprises administering to said hair, the hair
conditioner composition described above.

The invention also relates to a conditioning shampoo
composition that provides a noticeable increase in
temperature during use.

The invention also relates to a process for treating hair
which comprises administering to said hair, the conditioning
shampoo composition described above.

The hair conditioner compositions of the invention and the
conditioning shampoo compositions provide increased self-
warming during use (i.e., when applied to hair with water)
while not decreasing the hair conditioning provided and in
some cases increasing the hair conditioning provided. This
is an unexpected result, since the hair conditioner

compositions of the invention comprise microporous materials
such as molecular sieves which are a solid particulate
material which would be expected to decrease the
conditioning properties of the compositions of the invention
as compared to compositions without microporous materials or
molecular sieves. In fact the compositions of the invention

- 4 -

have the same or increased conditioning properties as noted above.

5 DETAILED DESCRIPTION OF THE INVENTION

Hair conditioner compositions of the invention include rinse-off and leave-in conditioners.

10 As used herein "essentially anhydrous" means ~~less than~~ about 2 weight % preferably less than about 1 weight % of water.

Unless other indicated, as used herein % means weight %. All of the starting materials described herein are either known
15 or can be prepared according to known methods. The essentially anhydrous hair conditioner compositions of the invention comprise:

- 20 (a) one or more microporous materials each of which has an average pore size larger than the critical diameter of a water molecule;
- (b) carrier molecules or molecular aggregates that have critical diameters larger than the largest average pore size of the microporous materials;
- 25 and;
- (c) conditioner molecules or molecular aggregates that have critical diameters larger than the largest average pore size of the microporous materials.

30 It is noted that each of the one or more microporous materials referred to above has an average pore size larger

- 5 -

than the critical diameter of a water molecule. The size of a water molecule is about 3.2 Angstroms. It is also noted that microporous materials with an average pore size of 3 Angstrom are used in compositions described below. Even though some of such microporous materials have too small a pore size to adsorb water, enough of such microporous materials have a large enough pore size to be useful in the compositions of the invention.

10 The microporous materials may be selected from the group consisting of inorganic salts such as crystalline metal silicates such as sodium potassium aluminum silicate, aluminum silicate, calcium aluminum silicate, activated alumina (aluminum oxide), clays which are silicates, known as diatomaceous silicas, bentonites and clays these are 15 aluminum oxides and silicon oxides, and crystalline metal aluminosilicates. Among the crystalline metal aluminosilicates which may be employed are aluminosilicates which range in average pore size from about 3 Angstroms to 20 about 10 Angstroms.

In general, the average pore size for the sieves that are used in the compositions of the invention can range from about 3 Angstroms to about 13 Angstroms or larger. more preferably, the average pore size of the sieves can range 25 from about 3 Angstroms to about 10 Angstroms.

The tradenames of these aluminum silicates include Aldrich 3A Sieves, Aldrich 1 OX Sieves, and Sylosiv A3 Sieves, and 30 Sylosiv A4 Sieves.

- 6 -

PQ Corporation is another molecular sieve supplier and the material that they supply, is an aluminosilicate is called Advera 401 N.

- 5 Organic resins such as activated charcoal may also be employed where the average pore size of the organic resins meets the parameters described above.

10 The microporous materials are normally present in a concentration of from 5% to 60%, preferably from 10 to 40% by weight based on the total weight of the hair treatment composition, or more preferably 15 to 30% by weight based on the total weight of the hair treatment composition.

- 15 Carrier materials must have a critical diameter larger than the largest average pore size of the microporous materials selected. With respect to the resulting anhydrous hair care composition, as long as most of the pores in the microporous material are unoccupied there will be a heating effect on
20 the addition of water.

The selected carrier materials have to be water soluble or water dispersible otherwise they could not be used on hair in combination with water.

25

Suitable carrier materials include hydrophilic glycols, polyethylene glycols, and polar solvents like alcohols. Any carrier used must either be water soluble or water dispersible.

30

- 7 -

The following list of hydrophilic glycols or polyhydric alcohols which may be used in compositions of the invention is meant to be illustrative and not limiting. These hydrophilic glycols are as follows: propylene glycol, ethylene glycol, glycerin, sorbitol, butanediol, butylene glycol, and mixtures thereof.

The following list of polyethylene glycols which may be used in compositions of the invention is meant to be illustrative and not limiting. These polyethylene glycols are as follows: PEGs -4, -6, -8, -9, -10, -12, -14, -16, -18, -20, -200, -400 and -600. Also included are beheneth -5 and -10, peg-7 betanaphthol and PEG-15 butanediol. Also included are buteth-3 carboxylic acid, butoxynol-5 and -19, PEG-8 C12-18 ester, C12 13 pareth-7 carboxylic acid, C1 1 -1 5 pareth-7 carboxylic acid, C1 2 -15 pareth-7 carboxylic acid, C14 -15 pareth-8 carboxylic acid, PEG-8 caprate, PEG-8 caprylate, PEG-8 caprate/caprylate, PEG -6, and -8 caprylic/capric glycerides, capryleth -6 and -9 carboxylic acids, ate, PEG-8 caprylate. Also included are ceteareth -2, -3, -4, -5, -5, -6, -7, -8, -10, , -11, -12, -13, -15, -6, -17, -18, and -20; choleth -1 0 and -20; PEG-3 cocamide, PEG-5 cocamide, PEG-6 cocamide, PEG-7 cocamide, PEG-1 1 cocamide, PEG-20 cocamide; PEG-2 cocamine, PEG-3 cocamine, PEG-5 cocamine, PEG-10 cocamine, PEG-15 cocamine, and PEG-20 cocamine; PEG-5 cocoate, PEG-8 cocoate, PEG-1 5 cocoate; coceth-3, 5, and -8; PEG-2 dilaurate, PEG-4 dilaurate, PEG-6 dilaurate, PEG-8 dilaurate, PEG-12 dilaurate, PEG-20 dilaurate, PEG-4 dioleate, PEG6 dioleate, PEG-8 dioleate, PEG-1 0 dioleate, PEG-1 2 dioleate, and isosteareth-2, isosteareth-3, isosteareth-10, isosteareth-12, and isosteareth-20;

- 8 -

isoceteth-10, and -20; isodeceth -4, -5, and -6; isostereath
-2, -3, 10, -12, and -20; PEG-3 lauramine oxide; PEG-2
laurate, PEG-4 laurate, PEG-6 laurate, PEG-8 laurate, PEG-9
laurate, PEG-10 laurate, PEG-12 laurate, PEG-14 laurate, and
5 PEG-20 laurate; laureth -1, -2, -3, -4, -5, -6, -7, -8, -9,
-10, -11, -12, -13, -14, -15, -16, and -20; oleth 2, -3, -4,
-5, -6, -7, -8, -9, -10, 12, -15, -16, and -20; stereath -2,
-3, -4, -5, -6, -7, -10, -11, -13, -14, -15, -16, and -20;
and trideceth -3, -5, -6, -9, -10, -11, -12, and -15.

10

The following list of polar solvents like alcohols which may
be used in compositions of the invention is meant to be
illustrative and not limiting. These polar solvents like
alcohols are as follows: methanol, ethanol, propanol,
15 butanol, pentanol, hexanol, heptanol and isopropanol and
mixtures thereof.

Carrier materials may be included in compositions of the
invention in a weight % range of about 40% to about 90%,
20 more preferably about 60 to about 80%.

Conditioner materials are selected from the group consisting
of quaternary ammonium compounds, amidoamines, silicones,
cationic polymers, hydrocarbons, fatty alcohols, either
25 alone or in combination. Any conditioner material which is
used in a composition of the invention must have a critical
diameter that is larger than the largest pore average size
of the microporous materials.

30 The following list of silicones which may be used in
compositions of the invention is meant to be illustrative

- 9 -

and not limiting. These silicones are as follows: a polyalkyl siloxane, a polyaryl siloxane or a polyalkylaryl siloxane.

- 5 Mixtures of volatile silicones as cyclotetrasiloxane, cyclopentasiloxane, or cyclohexasiloxane are useful. Mixtures of the nonvolatile silicone compounds are also useful. The so-called "rigid silicones", as described in U.S. Patent 4,902,499, herein incorporated by reference,
- 10 having a viscosity above 600,000 cs at 20C and a weight average molecular weight of at least about 500,000, also are useful in compositions of the present invention. A phenyltrimethicone also is useful as a nonvolatile silicone compound. Also useful is a mixture of a low molecular
- 15 weight silicone fluid and a higher molecular weight silicone gum. Silicones which are useful in compositions of the invention are described in US patent 5,656,280 which is hereby incorporated by reference.
- 20 Non-volatile silicones include siloxane or siloxane mixtures having a viscosity of greater than 10 centistokes. Nonlimiting examples include dimethicone, dimethiconol, amodimethicones, phenyl trimethicone and silicone copolyols.
- 25 The following list of cationic polymers which may be used in compositions of the invention is meant to be illustrative and not limiting. These cationic polymers are as follows: Guar hydroxypropyltrimonium chloride, poly(dimethyldiallylammonium chloride), poly(dimethyl
- 30 butenyl ammonium chloride) - bis (triethanolammonium chloride), Poly (dipropyldiallylammonium chloride), Poly

- 10 -

(methyl-beta propaniodiallylammonium chloride), Poly (diallylpiperidinium chloride), Poly (vinylpyridinium chloride), quaternised poly (vinyl alcohol), quaternised poly (dimethylaminoethylmethacrylate) and mixtures thereof.

5 These cationic polymers are described in U.S. Patent 5,580,550 which is hereby incorporated by reference.

The following list of hydrocarbons which may be used in compositions of the invention is meant to be illustrative
10 and not limiting. These hydrocarbons are as follows:
nonane, octane, heptane, tert-pentane, dodecane, decahexane, decane, heptadecane, trimethylheptane, trimethylhexane, 4-methylheptane, 4-methyldecane, isobutane, isopentane, isooctane, hexane, isododecane, polydecene, mineral oil,
15 paraffin wax and isohexadecane. Other exemplary volatile hydrocarbons are depicted in the general structural formula I wherein n ranges from 2 to 5.

20

Another exemplary hydrocarbon is ISO-PAR M (a C13-C14 isoparaffin available from Exxon Chemical Co. Baytown Texas). These compounds are described in U.S. Patent 5,656,280 which is hereby incorporated by reference. Also
25 included among volatile hydrocarbons which can be used in compositions of the invention are mineral oil, paraffins, fatty acids, caprylic/capric triglyceride, caprylic/capric diglyceryl succinate, propylene glycol dicaprylate/dicaprate, mineral jelly, acetylated lanolin, M-
30 quat 40, oil soluble lipo-protein, collagen/lanolin oil blend, mineral oil and lanolin alcohol, cetyl acetate,

- 11 -

lanolin oil, isopropyl palmitate and lanolin oil, silk powder, decyl neopentate, jojoba oil, and propoxylated polyol.

5 The following list of quaternary ammonium compounds which may be used in compositions of the invention is meant to be illustrative and not limiting. These compounds have the general structural formula: $N[R_1 R_2 R_3 R_4]^+ X^-$ where R_1 is an alkyl group including from about 8 to about 18 carbon atoms, 10 R_2 is selected from the group consisting of an alkyl group including from about 8 to about 18 carbon atoms, a hydrogen atom, a methyl group, an ethyl group, a hydroxymethyl group and a hydroxyethyl group, R_4 is selected from the group consisting of a hydrogen atom, a methyl group, an ethyl 15 group, a hydroxymethyl group, and a hydroxyethyl group; and X is an anion. The quaternary nitrogen of the quaternary ammonium compound can also be a component of a heterocyclic moiety such as morpholine or pyridine. The anion can be an anion such as chloride, methosulfate, ethosulfate, nitrate, 20 bromide, tosylate, acetate or phosphate.

The quaternary ammonium compounds have one or two long chain alkyl groups having from about 8 to about 18 carbon atoms. the long chain alkyl groups can also include in addition to, 25 or in replacement of carbon and hydrogen atoms, ether linkages or similar water solubilizing linkages the remaining two or three substituents of the quaternary nitrogen can be hydrogen or benzyl; or short chain alkyl or hydroxyalkyl groups such as methyl ethylhydroxymethyl or 30 hydroxyethyl groups, or combinations thereof either diether of the same or different identity.

- 12 -

Exemplary quaternary ammonium compounds include but are not limited to lauratrium chloride, quaternium -16, lauralkonium chloride, dicetyldimonium chloride, cetylpyridinium chloride, soyatrium chloride, mytrimonium chloride, cetrimum chloride, PEG-2 cocomonium chloride, PEG 2 cocoyl quaternium -4, PEG 2 oleyl quaternium 4 polyquaternium -6, -7, -11; -5, -24, and mixtures thereof. these quaternary ammonium compounds are described in U.S Patent 5,656,280 which is hereby incorporated by reference.

Other water-soluble ammonium compounds include distearyl dimonium chloride, and behenyl trimonium chloride.

The following list of amidoamines which may be used in compositions of the invention is meant to be illustrative and not limiting. These amidoamines include those described in U.S. Patent 5,328,685 which is hereby incorporated by reference.

Amidoamines include but are not limited to diethylaminoethylstearamine, isosteamidopropyl dimethylamine, cocamidopropyl dimethylamine, ricinoleamido propyl dimethylamine, oleamidopropyl dimethylamine, behenamidopropyl dimethylamine, palmitamidopropyl dimethylamine, stearamidoethyl diethylamine, stearamidylpropyl diethylamine, stearamidopropyl dimethylamine soyamido propyl dimethylamine and dimethylaminopropyl myristamide.

The following list of fatty alcohols which may be used in compositions of the invention is meant to be illustrative and not limiting. These fatty alcohols include a fatty

- 13 -

alcohol or fatty acid, or derivative thereof, or a mixture of any of these having a chain length of from about 8 to about 36 carbon atoms. More preferably from about 12 to about 22 carbon atoms. These materials may be predominantly
5 linear or may be branched. Preferred are stearyl alcohol, cetyl alcohol, behenyl alcohol, lauryl alcohol, myristyl alcohol, and coco alcohol.

Conditioner materials may be included in compositions of the
10 invention in a weight per cent range of about 2% to about 45 %, more preferably about 10 to about 30%.

Optional ingredients which can be used in compositions of the invention are now described.

15

Nonionic surfactants suitable for use in compositions of the invention include condensation products of aliphatic C8-C18 primary or secondary linear or branched chain alcohols or phenols with alkylene oxides, usually ethylene oxide, and
20 generally having from 6 to 30 ethylene oxide groups.

Other suitable nonionics include mono- or di-alkyl alkanolamides. Examples include coco mono- or diethanolamide and coco mono-isopropanolamide. Further
25 suitable nonionic surfactants are the alkylpolyglycosides (APG's). Typically, the APG is one which comprises an alkyl group connected (optionally via a bridging group) to a block of one or more glycosyl groups.

30 Amphoteric and zwitterionic surfactants suitable for use in compositions of the invention may include alkyl amine

- 14 -

oxides, alkyl betaines, alkyl amidopropyl betaines, alkyl sulphobetaines (sultaines), alkyl glycinate, alkyl carboxyglycinates, alkyl amphopropionates, alkylamphoglycinates alkyl amidopropyl hydroxysultaines, acyl taurates and acyl glutamates, wherein the alkyl and acyl groups have from 8 to 19 carbon atoms.

Examples include lauryl amine oxide, cocodimethyl sulphopropyl betaine and preferably lauryl betaine, cocamidopropyl betaine and sodium cocamphopropionate.

Further surfactants which may be suitable for use in conditioning shampoos in accordance with the invention include one or more anionic surfactants instead of or in addition to any of those surfactants mentioned above. Those surfactants must be dispersed or mixed in glycols, PEGS, etc.

Suitable anionic surfactants are the alkyl sulphates, alkyl either sulphates, alkaryl sulphonates, alkaroyl isethionates, alkyl succinate, alkyl sulphosuccinates, N-alkoyl sarcosinates, alkyl phosphates, alkyl ether phosphates, alkyl ether carboxylates, and alphi-olefin sulphonates, especially their sodium, magnesium, ammonium and mono-, di- and triethanolamine salts. The alkyl and acyl groups generally contain from 8 to 18 carbon atoms and may be unsaturated. The alkyl ether sulphates, alkyl ether phosphates and alkyl ether carboxylates may contain from one to 10 ethylene oxide or propylene oxide units per molecule, and preferably contain 2 to 3 ethylene oxide units per molecule.

- 15 -

Examples of suitable anionic surfactants include sodium oleyl succinate, ammonium lauryl sulphosuccinate, ammonium lauryl sulphate, sodium dodecylbenzene sulphonate, triethanolamine dodecylbenzene sulphonate, sodium cocoyl isethionate, sodium lauroyl isethionate and sodium N-lauryl sarcosinate. The most preferred anionic surfactants are sodium lauryl sulphate, triethanolamine lauryl sulphate, triethanolamine monolauryl phosphate, sodium lauryl ether sulphate 1 EO, 2EO and 3EO, ammonium lauryl sulphate and ammonium lauryl ether sulphate 1 EO, 2EO and 3EO.

As further optional components for inclusion in the compositions of the invention, the following may be mentioned: pH adjusting agents, viscosity modifiers, cosmetic fillers such as talc, kaolin; pearlescers, opacifiers, suspending agents, preservatives, coloring agents, dyes, proteins, herb and plant extracts, polyols and other moisturising.

Compositions of the invention can be made by using processes which are known in the art or by using processes which are analogous to those known in the art. Compositions of the invention can be made by using starting materials which are known in the art or by using starting materials which are obtainable from materials that are known in the art.

Compositions of the invention are used in a manner known for leave-in and wash-out conditioners. Namely, the hair is wet and then conditioner or conditioning shampoo is applied to the hair.

- 16 -

If the conditioner is a leave-in conditioner, it can be applied to wet or dry hair. If applied to dry hair, then water is added after such application. If the conditioner is a wash-out conditioner, the hair is the rinsed after application.

The self-warming that occurs with the use of the hair conditioner compositions arises when water molecules adsorb into the pores of the microporous materials. This step releases heat which is felt as self-warming. Up to a 170C increase or more, typically increases of 150C or more are achieved with compositions of the invention. 120C increase or more, or increases of 100C or more can also be achieved with compositions of the invention. The temperature increase, being referred to above, which is caused by compositions of the invention is the change which occurs in degrees C when 70 parts of composition is mixed with 30 parts water at room temperature.

Compositions of the invention are made by processes known in the art, or analogous to those known in the art using starting materials which are known in the art.

Ingredients which are used in compositions of the invention may fall within the following ranges of weight ratios:

- 17 -

INGREDIENT	WEIGHT %
Microporous materials	5-60
Carrier ingredients	20-80
Conditioner ingredients	1-30

Examples of the invention shown below are made by processes known in the art, or analogous to those known in the art.

SODIUM POTASSIUM ALUMINO SILCATE 3 Angstroms	20.0
FRAGRANCE	0.65

- 21 -

Example 5

Self-warming Shampoo can be prepared with ingredients in the following ranges:

5

INGREDIENT	WEIGHT %
PEG -200	Qs to 1 00
DIMETHICONE	.5 TO 1
SILICA	.1 to 5
GUAR HYDROXYPROPYLTRIMONIUM CHLORIDE	.05 to 1
LAURYL HYDROXYETHYL IMIDAZOLINE 100%	5 to 50
SODIUM POTASSIUM ALUMINOSILICATE A3	20
ADDITIVES	.01 to 5

- 22 -

TABLE I

COMPOSITION	WET COMBING TOTAL	WET COMBING MAX
	ENERGY mi	LOAD G FORCE
EXAMPLE1	12.97	14.48
EXAMPLE 2	11.93	12.97

- 5 The above table I demonstrates that compositions of the invention which comprise molecular sieves (example 2) have the same or even better wet combing properties than compositions without sieves (example 1) and that therefore, the compositions of the invention have the same or even
- 10 better conditioning properties than compositions without molecular sieves.

Table II

Summary of Self Warming Compositions-Effect of Molecular Sieve Addition

5

COMPOSITION	WATER DILUTION TEMP. IN DEGREES C ¹	PORE SIZE IN ANG. STROMS	WT. % MOL. SIEVES

- 24 -

TABLE NOTES

- 1) Water dilution temp increase is the change in
5 temperature in degrees C when 70 parts of
composition is mixed with 30 parts of water.
 - 2) NA is not applicable.
 - 3) Sylosiv 3A is a tradename of the molecular sieves
supplied by WR Grace.
 - 10 4) Aldrich 13X and Aldrich 3A are tradenames of
molecular sieves supplied by Aldrich Chemical.
 - 5) ZEOLEX 35-P is a tradename of amorphous sodium
aluminosilicate supplied by JM Huber.
- 15 The above table 11 demonstrates that compositions of the
invention (examples 2,3,4) raise temperature on mixing with
water significantly more degrees C than compositions without
molecular sieves and microporous materials (example 1). In
addition it demonstrates the need for appropriate selection
20 of microporous materials with carrier

- 25 -

CLAIMS

1. A hair conditioner composition which is essentially anhydrous that comprises:
 - 5 (a) one or more microporous materials each of which has an average pore size larger than the critical diameter of a water molecule;
 - (b) carrier molecules or molecular aggregates that have critical diameters larger than the largest average pore size of the microporous materials; and
 - 10 (c) conditioner molecules or molecular aggregates that have critical diameters larger than the largest average pore size of the microporous materials.
- 15 2. A composition according to claim 1 wherein the microporous ingredient is an inorganic salts such as crystalline metal silicates selected from the group consisting of sodium aluminum potassium silicate, aluminum silicate, calcium aluminum silicate, activated alumina
- 20 (aluminum oxide), diatomaceous silicas, bentonites, aluminum oxides, silicon oxides, and crystalline metal aluminosilicates.
3. A composition according to claim 2 wherein the
- 25 microporous material is an aluminosilicate which ranges in average pore size from about 3 Angstroms to about 10 Angstroms.
4. A composition according to claim 1 wherein the
- 30 microporous material is an activated charcoal.

- 26 -

5. A composition according to claim 1 wherein the carrier material is selected from the group consisting of hydrophilic glycols, polyethylene glycols, glycerin, and a polar solvent.

5

6. A composition according to claim 5 wherein the hydrophilic glycol is selected from the group consisting of propylene glycol, ethylene glycol, hexylene glycol, glycerin, sorbitol, butanediol, butylene glycol, and mixtures thereof.

10

7. A composition according to claim 5 wherein the polyethylene glycol is selected from the group consisting of PEGs -4, -6, -8, -9, -10, -12, -14, -16, -18, -20, -200, -400 and -600; beheneth -5 and -10; PEG-7 betanaphthol and PEG-15 butanediol; buteth-3 carboxylic acid, butoxynol-5 and -19, PEG-8 C12-18 ester, C12-13 pareth-7 carboxylic acid, C11-15 pareth-7 carboxylic acid, C12-15 pareth-7 carboxylic acid, C14-15 pareth-8 carboxylic acid, PEG-8 caprate, PEG-8 caprylate, PEG-8 caprate/caprylate, PEG-6, and -8 caprylic/capric glycerides, capryleth -6 and -9 carboxylic acids, PEG-8 caprylate; cetareth -2, -3, -4, -5, -6, -7, -8, -10, -11, -12, -13, -15, -6, -17, -18, and -20; choleth -10 and -20; PEG-3 cocamide, PEG-5 cocamide, PEG-6 cocamide, PEG-7 cocamide, PEG-11 cocamide, PEG-20 cocamide; PEG-2 cocamine, PEG-3 cocamine, PEG-5 cocamine, PEG-10 cocamine, PEG-15 cocamine, and PEG-20 cocamine; PEG-5 cocoate, PEG-8 cocoate, PEG-15 cocoate; coceth-3, 5, and -8; PEG-2 dilaurate, PEG-4 dilaurate, PEG-6 dilaurate, PEG-8 dilaurate, PEG-12 dilaurate, PEG-20 dilaurate, PEG-4 dioleate, PEG-6 dioleate, PEG-8 dioleate,

15

20

25

30

- 27 -

PEG-10 dioleate, PEG-12 dioleate, isosteareth-2, isosteareth-3, isosteareth-10, isosteareth-12, isosteareth-20; isoceteth-10, and -20; isodeceth-4, -5, and -6; isostereath-2, -3, -10, -12, and -20; PEG-3 lauramine oxide; 5 PEG-2 laurate, PEG-4 laurate, PEG-6 laurate, PEG-8 laurate, PEG-9 laurate, PEG-10 laurate, PEG-12 laurate, PEG-14 laurate, and PEG-20 laurate; laureth-1, -2, -3, -4, -5, -6, -7, -8, -9, -10, -11, -12, -13, -14, -15, -16, and -20; oleth-2, -3, -4, -5, -6, -7, -8, -9, -10, -12, -15, -16, and -20; 10 stereath-2, -3, -4, -5, -6, -7, -10, -11, -13, -14, -15, -16, and -20; and trideceth-3, -5, -6, -9, -10, -11, -12, and -15.

8. A composition according to claim 5 wherein the polar 15 solvent is selected from the group consisting of methanol, ethanol, propanol, butanol, pentanol, hexanol, heptanol, isopropanol and mixtures thereof.

9. A composition according to claim 1 wherein the 20 conditioner materials are selected from the group consisting of quaternary ammonium compounds, amidoamines, hydrophilic silicones, cationic polymers, hydrocarbons, fatty alcohols, and mixtures thereof.

25 10. A composition according to claim 9 wherein the silicone is selected from the group consisting of a polyalkyl siloxane, a polyaryl siloxane, a polyalkylaryl siloxane and mixtures thereof.

30 11. A composition according to claim 10 wherein the silicone is selected from the group consisting of a volatile

- 28 -

siloxane such as cyclotetrasiloxane, cyclopentasiloxane, cyclohexasiloxane, or mixtures thereof.

12. A composition according to claim 10 wherein the
5 silicone is a group of nonvolatile silicones consisting of dimethicone, dimethiconol, amodimethicone, phenyltrimethicone, silicone copolyol, and mixtures thereof.

13. A composition according to claim 9 wherein the cationic
10 polymer is selected from the group consisting of: Guar hydroxypropyltrimonium chloride, poly(dimethyldiallylammonium chloride), poly(dimethyl butenyl ammonium chloride)- bis (triethanolammonium chloride), Poly (dipropyldiallylammonium chloride), Poly
15 (methylbeta propaniodiallylammonium chloride), Poly (diallylpiperidinium chloride), Poly (vinylpyridinium chloride), quaternised poly (vinyl alcohol), quaternised poly(dimethylaminoethylmethacrylate) and mixtures thereof.

20 14. A composition according to claim 9 wherein the hydrocarbon is selected from the group consisting of nonane, octane, heptane, tert-pentane, dodecane, decahexane, decane, heptadecane, trimethylheptane, trimethylhexane, 4methylheptane, 4-methyldecane, isobutane, isopentane,
25 isooctane, hexane, isododecane, isohexadecane, and mixtures thereof.

15. A composition according to claim 9 wherein the quaternary ammonium compound is selected from the group
30 consisting of lauratrmonium chloride, quaternium -16, lauralkonium chloride, dicetyldimonium chloride, distearyl

- 29 -

dimonium chloride, behenyl dimonium chloride,
cetylpyridinium chloride, soyatrimonium chloride,
myristyltrimonium chloride, cetrimonium chloride, PEG-2
cocomonium chloride, PEG 2 cocoyl quaternium -4, PEG-2 oleyl
5 quaternium-4, polyquaternium -6, -7, -11, -5, -24, and
mixtures thereof.

16. A composition according to claim 14 wherein the
amidoamine is selected from the group consisting of
10 diethylaminoethylstearamide, isosteamidopropyldimethylamine,
cocamidopropyldimethylamine, ricinoleamido
propyldimethylamine, oleamidopropyldimethylamine,
behenamidopropyldimethylamine,
palmitamidopropyldimethylamine,
15 stearamidylethyldiethylamine, soyamido propyldimethylamine
and dimethylaminopropyl myristamide, stearamidylpropyl
dimethylamine.

17. A composition according to claim 9 wherein the fatty
20 alcohol is selected from the group consisting of stearyl
alcohol, cetyl alcohol, behenyl alcohol, myristle alcohol,
coco alcohol, and mixtures thereof.

18. A composition according to claim 1 which comprises:

25

30

- 30 -

	<u>INGREDIENT</u>	<u>WEIGHT %</u>
	PEG 200	50.45

15

19. A method for conditioning hair with self warming which comprises applying to said hair an effective amount of a composition according to claim 1 and then applying to the hair water.

20

20. A method for conditioning hair with self warming which comprises applying to said hair water, and then applying to the hair an effective amount of a composition according to claim 1.

25

21. A hair shampoo composition which is essentially anhydrous that comprises:

30

- (a) one or more microporous materials each of which has an average pore size larger than the critical diameter of a water molecule;

- 31 -

(b) carrier molecules or molecular aggregates that have critical diameters larger than the largest average pore size of the microporous materials; and

5 (c) shampoo molecules or molecular aggregates that have critical diameters larger than the average largest pore size of the microporous materials.

22. A method for shampooing hair with self warming which
10 comprises applying to said hair water, and then applying to the hair an effective amount of a shampoo composition according to claim 21.

23. A method for shampooing hair with self warming which
15 comprises applying to said hair an effective amount of a shampoo composition according to claim 21, and then applying to the hair water.

24. A hair shampoo and conditioner composition which is
20 essentially anhydrous that comprises:

- (a) one or more microporous materials each of which has an average pore size larger than the critical diameter of a water molecule;
- 25 (b) carrier molecules or molecular aggregates that have critical diameters larger than the average largest pore size of the microporous materials; and
- (c) conditioner molecules or molecular aggregates that have critical diameters larger than the largest
30 average pore size of the microporous materials;

- 32 -

(d) shampoo molecules or molecular aggregates that have critical diameters larger than the average largest pore size of the microporous materials.

- 5 25. A method for shampooing and conditioning hair with self warming which comprises applying to said hair water, and then applying to the hair an effective amount of a shampoo and conditioner composition according to claim 24.
- 10 26. A method for shampooing and conditioning hair with self warming which comprises applying to said hair an effective amount of a shampoo and conditioner composition according to claim 24, and then applying to the hair water-
- 15 27. A composition in accordance with claim 1, wherein the average pore size is from about 3 Angstroms to about 13 Angstroms.
- 20 28. A composition in accordance with claim 1, wherein the average pore size is from about 3 Angstroms to about 10 Angstroms.

INTERNATIONAL SEARCH REPORT

international application No.

PCT/EP 99/10168

Box I Observations where certain claims were found unsearchable (Continuation of Item 1 of first sheet)

This International Search Report has not been established in respect of certain claims under Article 17(2)(a) for the following reasons:

1. ☐ Claims Nos.:
because they relate to subject matter not required to be searched by this Authority, namely:
2. ☒ Claims Nos.:
because they relate to parts of the International Application that do not comply with the prescribed requirements to such an extent that no meaningful International Search can be carried out, specifically:
See FURTHER INFORMATION SHEET PCT/ISA/210
3. ☐ Claims Nos.:
because they are dependent claims and are not drafted in accordance with the second and third sentences of Rule 6.4(a).

Box II Observations where unity of invention is lacking (Continuation of Item 2 of first sheet)

This International Searching Authority found multiple inventions in this international application, as follows:

1. ☐ As all required additional search fees were timely paid by the applicant, this International Search Report covers all searchable claims.
2. ☐ As all searchable claims could be searched without effort justifying an additional fee, this Authority did not invite payment of any additional fee.
3. ☐ As only some of the required additional search fees were timely paid by the applicant, this International Search Report covers only those claims for which fees were paid, specifically claims Nos.:
4. ☐ No required additional search fees were timely paid by the applicant. Consequently, this International Search Report is restricted to the invention first mentioned in the claims; it is covered by claims Nos.:

Remark on Protest

- ☐ The additional search fees were accompanied by the applicant's protest.
- ☐ No protest accompanied the payment of additional search fees.

FURTHER INFORMATION CONTINUED FROM PCT/ISA/ 210

Continuation of Box I.2

Claims Nos.: 1-17, 19-20 and 27-28 (partially); 21-26 (not searched)

Present claims 1-17 and 19-20 and 27-28 relate to a composition defined by reference to the following parameters of the constituent compounds:

P1: critical diameter of the water molecule

P2: average pore size of microporous materials

P3: critical diameter of the carrier molecules

P4: critical diameter of the conditioner molecules

and by the following ratios:

P2/P1

P3/P2

P4/P2

The use of these parameters in the present context is considered to lead to a lack of clarity within the meaning of Article 6 PCT. It is impossible to compare the parameters the applicant has chosen to employ with what is set out in the prior art. The lack of clarity is such as to render a meaningful complete search impossible.

Furthermore, the term "molecular aggregates" is obscure. It has not been disclosed in the application in a manner sufficiently clear and complete to allow the skilled man to understand the application (Article 5 PCT). It is doubtful whether the critical diameter refers to the molecule or to the molecular aggregate.

Moreover, the term "shampoo molecules" of claims 21-26 it is not usual in the art and it is not clear to the skilled person. It also has not been disclosed in the application in a manner sufficiently clear and complete to allow the skilled person to understand the application (Article 5 PCT). As a consequence and considering also the above mentioned objections to clarity (to the parameters and to the term "molecular aggregate") a meaningful search of these particular claims is considered to be impossible. Claims 21-26 have not been searched.

Consequently, the search has been restricted to a composition comprising one or more microporous materials (as defined in the description, page 5, line 10-page 6, line 7), carrier molecules (as defined on page 6, line 26-page 8, line 16) and conditioner molecules (as defined on page 8, line 22-page 13, line 11), as defined completely in the claims with due regard to the general idea underlying the application.

The applicant's attention is drawn to the fact that claims, or parts of claims, relating to inventions in respect of which no international search report has been established need not be the subject of an international preliminary examination (Rule 66.1(e) PCT). The applicant is advised that the EPO policy when acting as an International Preliminary Examining Authority is normally not to carry out a preliminary examination on matter which has not been searched. This is

FURTHER INFORMATION CONTINUED FROM PCT/ISA/ 210

the case irrespective of whether or not the claims are amended following receipt of the search report or during any Chapter II procedure.
